

Get the most out of your Eye Tracking Lab

Eye Tracking Lab Consultation

A research lab is a sophisticated system. It needs to be a friendly environment for the research subject, at the same time it is a complex system of integrated parts every aspect of which needs to be controlled.

Our consultants will help you to:

- define the system requirements before you build your eye tracking lab.
- fine-tune and maximize the performance of your eye tracking lab.
- enable a millisecond data synchronization between your stimuli presentation and your eye tracking data.
- enable real-time remote viewing of eye tracking data from a viewing room.
- integrate your Tobii Eye tracker with PST E-Prime or other third-party software.
- integrate your Tobii Eye tracker with EEG systems or biofeedback sensors.
- solve any other eye tracking related challenge that you may face within your lab.

The Tobii Consultancy services offer an efficient way to optimize your eye tracking lab. We provide you with the means to create and sustain a top-of-the-line eye tracking lab.

For further information please contact your regional sales representative.
