This document is intended to be a quick guide on how to assemble the eye tracker. It should not be used as a substitute for the user manual.

- Only use arms and stands specified by Tobii and make sure that they are mounted and fastened correctly according to the instructions.
- Do not mount the eye tracker on unstable and/or uneven surfaces.
- It is recommended that you connect the power cable of the eye tracker and computer to an outlet with a protective earthing connection.
- Make sure that the cables are properly placed to avoid a possible trip hazard.
- Only use the power supplies sent with the eye tracker. Using different power supplies will void the warranty.

For further information on product care and usage read the Tobii TX300 Eye Tracker User Manual.
Integrated setup
3a Note: Step 3 is only necessary if the lid is attached to the eye tracking unit.
